

Your pastel rank overlay is ready

This guide takes you from download to a sharp live browser source in OBS, Meld, or Streamlabs.

START HERE

<https://pastel-valorant-rank-widget.vercel.app/>

You will need your Riot ID, a free HenrikDev API key, an internet connection, and streaming software that supports browser sources.

1. Get your free HenrikDev API key

HenrikDev provides the live Valorant rank data used by the widget. The key is free and must be generated by the buyer.

- 1 Open the [HenrikDev management dashboard](#).
- 2 Select **API Keys** from the sidebar.
- 3 Complete the **Generate New Key** form.
- 4 Copy the generated key and keep it private.

PRIVACY

The setup page masks your key. It is placed after # in your copied widget URL so it is not part of the initial page request. Never share your complete widget URL.

2. Build your browser-source URL

- 1 Open [the pastel overlay setup page](#).
- 2 Paste your HenrikDev API key.
- 3 Enter your Riot ID in **Name#TAG** format.
- 4 Choose **PC** or **Console**.
- 5 Under **Theme**, choose **Pastel** or **Halloween**. For Pastel, choose Rose, Lavender, Sky, Mint, or Peach.
- 6 Select the search icon to confirm your live rank data.
- 7 Select the copy icon beside the browser-source URL.

3. Add the widget to your stream

- 1 Add a new **Browser Source** in OBS, Meld, Streamlabs, or compatible software.
- 2 Paste the complete widget URL you copied from the setup page.
- 3 Set the Browser Source width to **1952** and height to **1104**.
- 4 Leave the Custom CSS field empty.
- 5 Scale the source down inside your scene until it fits your layout.
- 6 Lock the source after positioning it.

SHARPEST RESULT

Always add the widget at 1952 x 1104 and scale it down. Do not create a small source and enlarge it.

What the widget displays

Current rank, RR progress, K/D, wins, losses, and win rate. Rank data refreshes every 60 seconds. Console match details may be limited by the data provider; when K/D is unavailable, games played are shown instead.

Themes and palettes

Choose Pastel with Rose, Lavender, Sky, Mint, or Peach, or select Halloween for an animated seasonal design. To switch themes, generate a new URL, replace your Browser Source URL, and refresh it.

Troubleshooting and support

I cannot find the Halloween theme

Use pastel-valorant-rank-widget.vercel.app, the current setup page linked on page 1. Enter your existing API key and Riot ID, select Halloween, and copy the new URL into your existing Browser Source. Refresh the source. The older setup site has no Theme selector.

The widget is blank

Confirm that the URL includes your Riot ID and a section beginning with #api_key=. Refresh the browser source and check that the source is 1952 x 1104.

The API key is rejected

Return to the HenrikDev dashboard, confirm the key is active, then paste it into the setup page again. Generate a new key if needed.

The widget looks blurry

Set the Browser Source itself to 1952 x 1104, then scale the source down inside the scene. Avoid scaling a small browser source up.

The colors look wrong

Update OBS or your streaming software to a current version, refresh the browser-source cache, and leave Custom CSS empty.

NEED HELP?

Message the seller with a screenshot of your Browser Source settings. Never send your API key. Hide everything after # in the widget URL before sharing it.

Personal-use license

You may use the overlay on your own streams, recordings, and social clips. You may not resell, redistribute, share, or repackage the files, hosted widget access, complete widget URL, API key, design, or documentation.

Thank you for supporting OverlayNode. Enjoy your new stream overlay!
